

PURE³

The PURE³ is an 8 stage water purification system featuring a unique combination of RCAT (Redundant Capture and Treat) patent pending technologies with a maximum contaminant level goal (MCLG) established at the level at which no known or anticipated adverse effects on health of persons occur and which allows an adequate margin of safety. It can purify up to 1100 plus gallons of water per day and effectively remove chemical, biological, radiological and nuclear contaminants (CBRN) from drinking water, such as uranium, radon, bacteria, viruses, primary health related organic contaminants such as dichlorethylene, endrin, toxaphene, heptachlor; primary health related inorganic contaminants such as arsenic, cadmium, lead, nitrates and secondary contaminants such as copper, zinc and TDS.

FEATURES / BENEFITS

- Dimensions: 36" L x 12" W x 30" H
- Capacity: 1100 plus gallons per day
- 8 stage filtration system
- Weight: 105 pounds
- Compact frame mounted
- NSF and EPA standard compliant
- Radionuclude indicator
- Effective on particle and gaseous contaminants
- Easy installation for residential and light commercial applications
- Easy to service long service life
- Chemical free disinfection
- Peace of mind with safe water for your family and / or your business

REMOVED CONTAMINANTS LISTED

- Primary organic contaminants
- Primary inorganic contaminants
- Biological agents
- Ground water radionuclides
- Gaseous radionuclides

EXAMPLES OF SPECIFIC CONTAMINANTS

- Microbial
- Nitrates
- lodine 131
- Cesium 137
- Uranium 226 and 228
- Chemicals arsenic, lead, pesticides
